SUMMARY

Full-stack web developer who builds software for real business problems: a wine club billing platform, Clover POS integrations and daily-use staff tools at a working winery, plus 3 years of freelance web development for small businesses.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, SQL, HTML, CSS
Frameworks and libraries: React, Next.js, Vitest, Pillow, Requests, BeautifulSoup
Data and APIs: PostgreSQL, Supabase (row-level security), SQLite, REST APIs (Clover, OwnerRez, Twilio, Telegram, DexScreener)
Tools and platforms: Git, GitHub, GitHub Actions (CI/CD), Vercel, Render, Webflow, Make.com, Synthflow
Practices: AI-assisted development with code review and testing, multi-tenant data design, requirements gathering, UI/UX

EXPERIENCE

14 Acres Vineyard & Winery, Ridgefield, WA Feb 2024 – Aug 2025; May 2026 – Present
Marketing & Technology Lead Jul 2026 – Present

- **Trellis (in development):** designing and directing an AI-assisted multi-tenant billing platform (Next.js, TypeScript, PostgreSQL, Render workers) to replace a discontinued vendor for about 800 club members; first live charges Jan 2027.
- Built Trellis to bill safely across wineries: idempotency keys on Clover API payments prevent double charges, tenant IDs and Postgres row-level security isolate each winery's data, and every change passes lint, tests and a secret scan in GitHub Actions plus manual review.
- Gave the owner and GM one view of revenue and top food and wine sellers by building a customer spend tracker that syncs Clover POS orders nightly (Supabase function, Vercel Cron) into Postgres; it now holds 50,000+ orders.
- Replaced inaccurate paper cash counts for 8–10 staff by rebuilding a buggy prototype in Next.js and Supabase that checks each drawer count against Clover cash sales; every flagged mismatch so far has been under $1.
- Migrated the website from WordPress to Webflow (Sept 2026, 100–300 daily users), adding 4 validated lead forms, a 21+ age gate, a mobile QR hub and GTM/GA4 conversion tracking.
- Put about 40 wines in one place for the winemaker by building an inventory app (Next.js, Supabase, Vercel).
- Built a TV display that turns the website's events CMS into tasting room slides, so the screens update with no manual edits.
- Maintain an AI phone receptionist (Synthflow, Make.com, Twilio) that answers about 50 calls a day; train staff on each system.

Assistant Winemaker and Vineyard Manager Aug 2024 – Aug 2025
Dishwasher Feb 2024 – Aug 2024

Freelance Web Developer, Self-employed, Vancouver, WA Oct 2023 – Present

- Shipped about 12 client websites for small businesses in Webflow and Next.js, from design through launch.
- Building two Next.js rental booking sites for New Adventure Homes on the OwnerRez API and Supabase, launching Nov 2026.
- Cut image sizes 70–80% on 3 client sites (200–300 images each) with Python scripts (BeautifulSoup, Pillow).
- Built a Make.com lead engine for Royal Service Cleaning so every website inquiry reaches the client automatically.

PROJECTS

Chess Variant | JavaScript, HTML, CSS, WebSockets | hand-written | GitHub In progress

- Built a browser chess variant where squares move as well as pieces; adding live two-player WebSocket matches by Jan 2027.

Customer Identity Matcher | TypeScript, Vitest | hand-written In progress

- Building a name-similarity matcher, tested with Vitest, to merge duplicate Clover customer records.

Crypto Telegram Bot | Python, SQLite, Telegram API, DexScreener API | hand-written | GitHub 2022

- Replaced hours of scanning crypto Telegram chats with a bot that sends DexScreener data when a coin is called repeatedly.

EDUCATION AND CERTIFICATIONS

B.S. Computer Science, Western Governors University Expected Dec 2027
Clark College, Vancouver, WA Fall 2024 – Spring 2025
Coursework: Calculus series, Digital Logic Design, Intro to Computer Science, Technical Writing
Webflow Visual Developer Certification Apr 2026

VOLUNTEERING

Volunteer, about 5 hours a week: run slides and AV for weekly events and help lead middle and high school students.
